

# TEAK | DECKSTERNO

## TECHNICAL DATA:

**BOTANICAL NAME:** Tectona Grandis  
**FAMILY:** Hardwood Verbenaceae  
**ORIGIN:** East Asia (Burma or Java)  
**DURABILITY:** 1F MRT  
**SURFACE FINISH:** Smooth or knurled, untreated  
**DIMENSIONAL STABILITY:** High  
**VOLUMETRIC MASS:** 12% UNI EN 3502-2:1996 / Average 680 Kg/mc  
**SURFACE HARDNESS:** Medium  
**COLOURING:** Golden or medium brown  
**FIRE RESISTANCE CLASS:** 1. Highly resistant

Straight fibres, though sometimes wavy or braided. Although cultivation is widespread all over the world, teak is expensive and perhaps one of the most expensive woods on the market, at least for wood of large dimensions. The most common uses are usually in boat-building, veneering, furniture, outdoor construction, fine flooring, carving and small turned wooden objects.

With its superb stability, excellent strength, easy workability and high resistance to decay and putrefaction, it's no wonder that teak ranks high among the world's most renowned and desired woods.
